

AliveColors 12 Brings New AI-Powered Creative Tools: Cloud & Local Image Generation

August 25, 2026 — AKVIS announces the release of AliveColors 12, a major update to its cross-platform image editor, introducing powerful AI-powered tools, expanded brush support, improved automation, enhanced RAW processing, and greater stability.

AliveColors is a powerful cross-platform editing suite for both raster and vector graphics. Whether you're a professional designer, photographer, or a creative hobbyist, this versatile software is your go-to solution for all your image manipulation and design needs.

The new version adds **Cloud Image Generation**, giving users access to advanced AI models without requiring powerful hardware. At the same time, **Local Image Generation** now supports additional AI models that can run directly on the user's computer, enabling offline work with greater control and privacy.

AliveColors 12 also introduces Photoshop Brushes support and the ABR format, providing new possibilities for digital painting, retouching, and creative work. Improved Actions support more tools, making repetitive editing tasks faster and more efficient.

Additional improvements include enhanced RAW processing, interface refinements, and numerous stability and performance fixes.

The program is available in two licenses. The **Free** license is perfect for personal, non-commercial use with access to all features. The perpetual, lifetime **Business** is designed for professionals and organizations, this license grants commercial use of the software.

AliveColors 12 is available for Windows 10-11, macOS 10.15-26, and Linux.
